Overview

When a FLO unit with Heat Reclaim is installed on a customer site, connections between the HVAC controller

(i-Controller 2.0e) and the site's refrigeration controller must be completed for proper heat reclamation from the refrigeration system. This document describes the steps necessary to connect a FLO unit i-Controller 2.0e to an Emerson E2E refrigeration controller installed on the refrigeration system.

NOTE: Improper coil installation or controller programming will greatly compromise the performance of your unit. Verify the following steps to ensure correct installation and operation.

REVISION HISTORY

Revision (n-ddmmyyyy)	Modification
D1-13November2018	Initial Draft
1-06April2021	Published
1-11MAY2021	Rebranded as Flo
1-12JUNE2026	Updated for IC2.0e
